## Manhattan

Residential Market Report
Second Quarter 2008

## New Development Activity Fuels Price Increases

Apartments in new developments accounted for over one-third of all closings during the second quarter, helping to keep Manhattan apartment prices near record levels. At $\$ 1,663,533$, the average price was up $36 \%$ from the second quarter of 2007 , but down $2 \%$ from the prior quarter's record.

Similar to the past few quarters, closings at 15 Central Park West and The Plaza had a major impact on the average price. Removing these sales would reduce this figure $\$ 177,749$ to $\$ 1,485,784$, but it would still be $21 \%$ higher than the second quarter of 2007 . This effect will diminish over the next few months as the initial closings in these buildings come to an end. The increased share of new development activity also pushed the median price up $23 \%$ over the past year, to a record $\$ 979,000$. It is interesting to note that while the average apartment price in Manhattan is over $\$ 1.6$ million, more than half of all closings are still for under \$1 million.

At $\$ 1,975,695$, the average condo price was $38 \%$ higher than 2007's second quarter, and down slightly from the prior quarter's record level. This figure was dramatically influenced by 15 Central Park West and The Plaza, and removing them would bring the average condo price down $\$ 319,485$ to $\$ 1,656,210$, still $16 \%$ higher than a year ago.

Cooperative prices, which are almost exclusively resales, also rose sharply from 2007's second quarter. At $\$ 1,292,652$, the average co-op price was $22 \%$ higher than a year ago, but down $3 \%$ from the first quarter of 2008's record. Much of this gain was due to larger apartments, as the average price rose $29 \%$ for 4 -bedroom and larger co-ops, and $23 \%$ for 3-bedroom co-ops over the past year.

As concern over Wall Street has intensified, there has been an anticipation of a decline in real estate prices. It's important to remember that besides the underlying strength in the market, there are a few more reasons the average and median price have remained so high. First, there is a lag time from when a contract is signed to when the sale actually closes, and it is closings that are presented in this report. As we mentioned before, new development condos comprised over one-third of the closings in the second quarter. From deed information, we see that the average date that contracts were signed for these units was June 9, 2007, before the credit crisis came to light. Second, economic data for the City has yet to show any real weakness. As of May, unemployment in the City was $4.8 \%$, below the $5.5 \%$ rate of the nation. Also, City payrolls in May had almost 37,000 more employees than a year ago. While we know Wall Street layoffs are coming, many laid off workers have yet to disappear from payrolls.

Transaction data for this market report is provided by ValuExchange, a proprietary database containing the largest known survey of the Manhattan residential market. This report is based on 2,988 recorded Manhattan apartment sales. This represents a decrease of $18 \%$ from sales reported during the same period in 2007.

Gregory J. Heym
Chief Economist, Brown Harris Stevens

# Manhattan Cooperatives and Condominiums 

Strong activity in new developments helped drive the average Manhattan apartment price up 36\% over the past year to $\$ 1,663,533$. Removing closings at 15 Central Park West and The Plaza would bring the average price down $\$ 177,749$ to \$1,485,784, still 21\% bigher than during the second quarter of 2007.
